

Acquired Brain Injury Clinic

The Barrow Difference

The therapists at Barrow are dedicated to the evaluation and treatment of patients with neurological injuries and diseases. As part of a highly specialized institution, they have collectively obtained an unparalleled amount of experience in caring for individuals with acquired brain injuries. Our therapists are committed to helping you return to the highest level of function and independence possible.

In addition to a highly experienced, multidisciplinary team, the Barrow Acquired Brain Injury Clinic offers advanced rehabilitation technologies—such as exoskeletons and other neuro-robotic devices. Many of our therapists have received special training in these technologies.

We know your journey doesn't end when your neuro-rehabilitation is complete. Experiencing a brain injury often means adapting to a new normal, which is why we also offer a peer mentorship program to provide long-term support and adaptive recreation opportunities to improve quality of life.

This clinic is designed for patients with neurological impairments that need neuro rehabilitation services, but do not meet criteria for inpatient rehab.

Treatment Diagnoses:

- Acute Traumatic and Non-Traumatic Brain Injury
- i.e. brain injury from an accident, stroke, brain tumor, subdural hematoma, encephalitis, etc.
