# Barrow Concussion Network Concussion Facts

What is a concussion?

A concussion is an injury to the brain caused by rapid, forceful movement of the brain against the skull. It is usually caused by a bump or blow to the head, but it can also occur when the upper body is shaken violently.

## Signs and Symptoms

- Headache or head "pressure"
- Nausea or vomiting
- Balance problems
- Double or blurry vision
- Sensitivity to light or noise
- Feeling sluggish, hazy, or foggy
- Concentration or memory problems
- Just not "feeling right," or "feeling down"

### **Red Flags**

In rare cases, a brain bleed may be possible after a bump, jolt, or blow to the head or body. Some red flags to watch out for are:

- One pupil larger than the other
- A headache that gets worse
- Drowsiness or inability to wake up
- Slurred speech, weakness, or numbness
- Decreased coordination
- Repeated vomiting or nausea
- Convulsions or seizures
- Unusual behavior, increased confusion
- Loss of consciousness at time of injury

#### If any of these symptoms occur,

call 911 right away or go directly to the emergency room.

If you suspect you have, or someone you know has, suffered a concussion, it is best to see a health care provider as soon as possible for evaluation.

## Concussions affect everyone differently,

and symptoms may last longer or shorter depending on age and person.

# **Symptoms**

can last anywhere from:

10-14 days in children

7-10 days in adults
