

Barrow Cleft and Craniofacial Center

An executive in the medical device and surgical instrument markets, Jason Clark is also a patient at Barrow Cleft and Craniofacial Center. He was born with Treacher Collins syndrome, has had many surgeries that required a lot of recovery time, and is affected by hearing loss. While Jason's experience growing up was quite different than what the fictional character Auggie, he says his parents, teachers, and fellow students were all important to his development. "This group—those with Treacher Collins Syndrome—is very special. They go through many surgeries and recover. They endure comments from the public and persevere," says Jason, 46. "The thing I want people to know is that we will all succeed. It's going to be twice the amount of work, but it pays off."
